

## Task 1. - Adding a red box to a viewer

```
import inf.v3d.object.*;
import inf.v3d.viewer.*;

public class MyScene {
    public static void main (String[] args) {
        Box b1 = new Box();
        b1.setColor ("red");

        Viewer v = new Viewer();
        v.addObject3D(b1);
        v.setVisible (true);
    }
}
```

→ induira da uvođuo (importyerno) sve objekte i metode iz klase

→ deklariseo klasu

→ deklariseo main metodu (startnu / programu)

→ deklariseo objekat box i tipa Box → bez postavljanja parametara

→ podesimo boju kutije na crvenu

→ deklariseo objekat v tipa Viewer

→ dodajemo objekat b1 u Viewer

## Result:

## Task 2. - Adding other objects (cone, sphere)

We want to create a scene like this in the viewer

### Java code:

`package chapter 1;` → zavisí od paketa koji koristimo, tj. mena (automatski se generise u Eclipse)

`import inf.v3d.obj.*;`  
`import inf.v3d.obj.Object3D;`  
`import inf.v3d.view.*;` } importovano potrebne biblioteke

`public class AddObjects {` → deklarisanu klasu (kao i ime file-a)  
`public static void main (String[] args) {` → deklarisanu main metodu

`Box b1 = new Box (0.0, 0.0, 0.0);`  
`b1.setSize (4.0, 4.0, 4.0);`  
`b1.setColor ("red");`  
 x, y, z → pozicija  
 h, w, h → velicina  
 → deklarisanu b1 objekt tipa Box, podesavamo mu poziciju, velicinu, boju

`Cone cone1 = new Cone ();`  
`cone1.setCenter (6.0, 0.0, 2.0);`  
`cone1.setHeight (7);`  
`cone1.setColor ("yellow");`  
`cone1.setRadius (2);`  
 → deklarisanu objekt cone1 tipa Cone, podesavamo mu poziciju, visinu, boju, poluprecnik baze

`Box b2 = new Box (8.0, 0.0, 1.0);`  
`b2.setSize (2.0, 2.0, 2.0);`  
`b2.setColor ("green");`  
 → deklarisanu objekt b2 tipa Box, podesavamo velicinu, poziciju i boju (vertical)

Sphere sphere = new Sphere(8.0, 0.0, 1.0);

sphere.setRadius(1.0);  
sphere.setColor("blue");

Declarisemo objekt sphere  
tipa Sphere i  
podesimo parametre (centra  
radius i boju

Viewer v = new Viewer();

v.addObject3D(cone1);

v.addObject3D(b1);

v.addObject3D(sphere);

v.addObject3D(b2);

v.setVisible("true");

}

}

Declarisemo objekt  
v tipa Viewer i  
u njega dodajemo  
objekte kako bi  
dobili grafiku  
prikaz:

Zatim, animov  
vidljivim da bi  
ga prikazali pri  
pokretanju  
programa

Dobijeni rezultat je zadovoljavajući,  
što je vidljivo ako se ovaj JAVA code  
unesu u ECLIPSE.
